

What does it consist of?

- A main control valve, which is connected to the main water inlet,
- Maximum 5 pieces of wireless water sensors, which can be placed in the kitchen, in the bathroom, in the basement, or other wet rooms, also on the floor

How does it protect your home?

The remote sensor of the device continuously monitors any water appearing on the floor and detects when it is exposed to moisture. If that is the case, it will send a signal to the main control valve, which will block the path of the incoming water source, preventing further water leakage and damage caused by water.

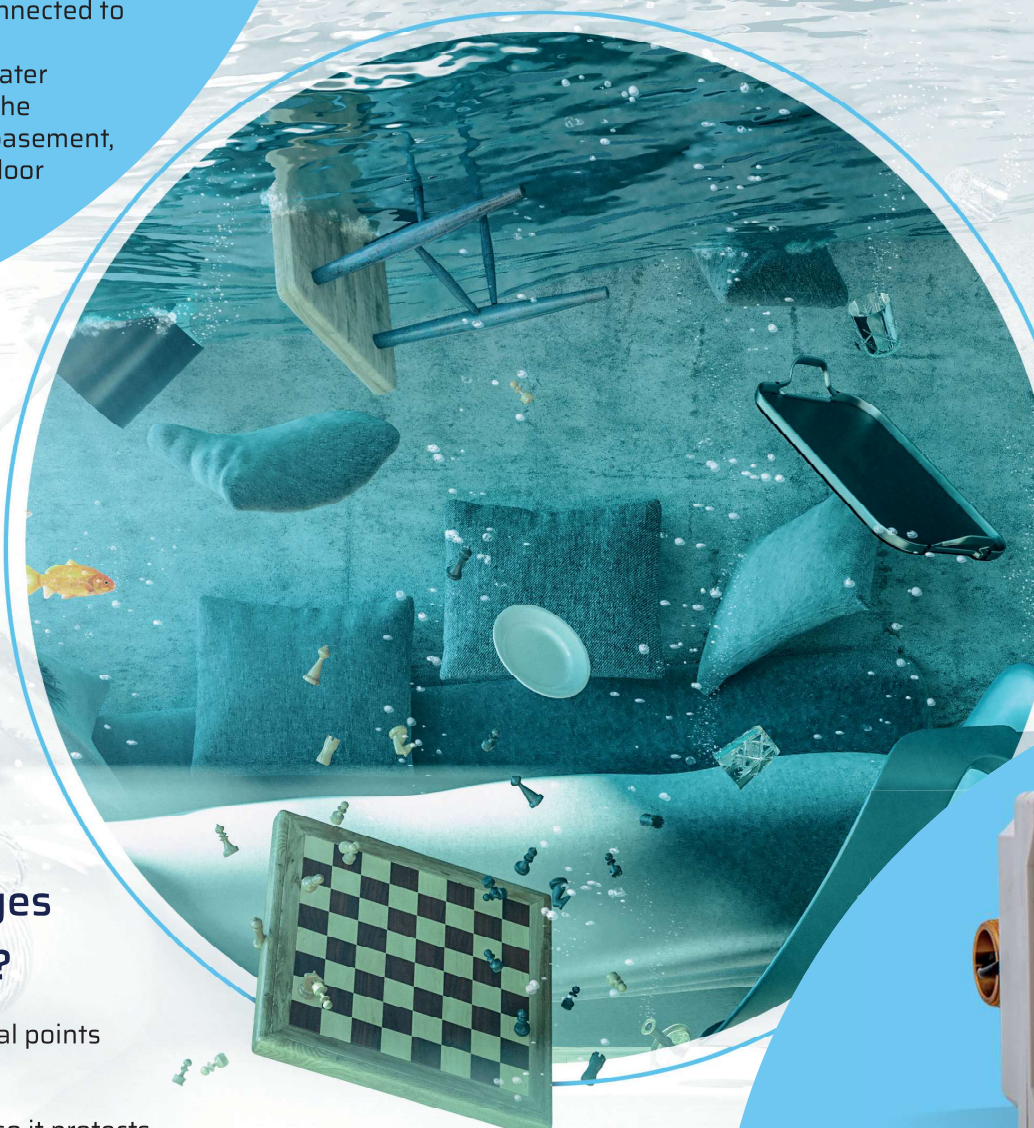

What further advantages does the product have?

- Monitors water leakage at several points
- It is water resistant
- It can be installed without wires
- It has an uninterrupted battery, so it protects your home also in case of a power outage

Wireless water leakage sensor and shut-off valve

**Be safe from
water damage
24 hours a day!**

Most people fear of damage to their homes caused by electrical faults, fires, and storms. However, many people have no idea what dangers a possible pipe break or water leak entails.

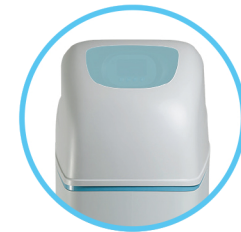

Household applications

Pre-filters

Water softeners

Water purifiers

UV devices
